

modulesync

How Vox Pupuli Manages 133 141 modules

What is Vox Pupuli

Vox Pupuli

What?

- Maintain many many Puppet modules
- Be helpful and polite to each other
 - Be open-minded to people and technology
- Provide a home for orphaned Puppet modules
- Unite lonely module and tooling authors to a collective
- Ensure continued development for our code

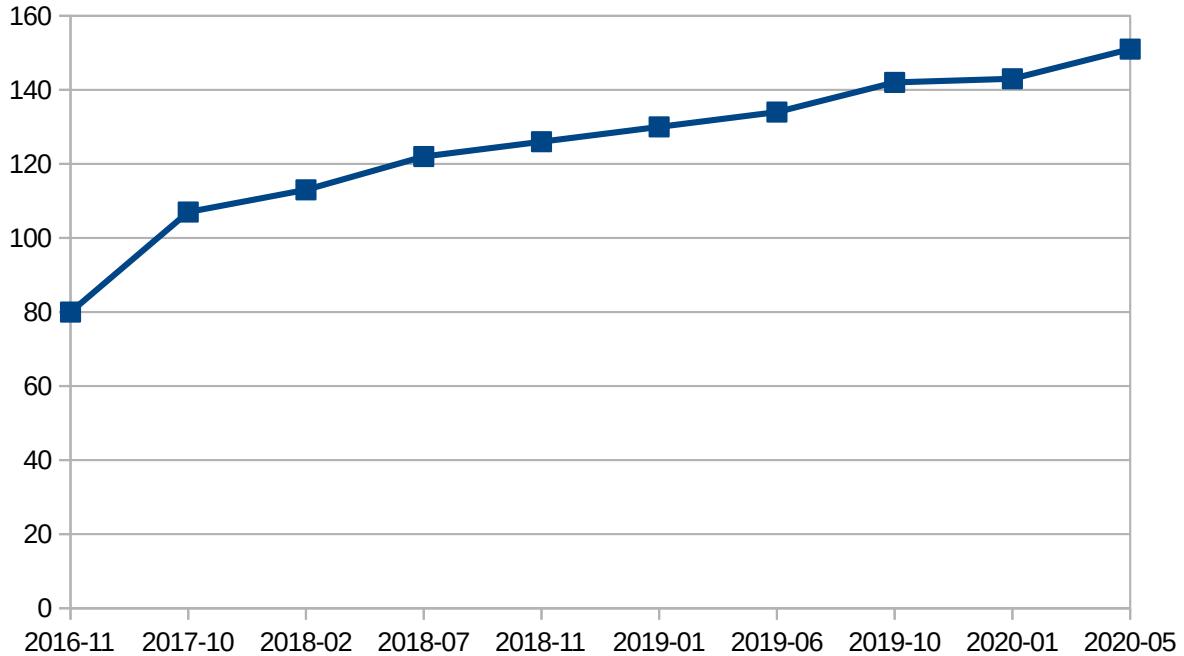

@bastelsblog for @voxpupuliorg

Vox Pupuli

What?

Who?

- Amount of Vox Pupuli members with merge permissions

@bastelsblog for @voxpupuliorg

Vox Pupuli

What?

- Many git newbies

Who?

- Rebasing a feature branch against upstream master is hard
- Many newcomers to test frameworks
 - Dealing with rspec/rubocop/beaker is hard as well
- Many administrators of legacy infrastructures
 - Stuff older than Puppet 5 without proper hiera5/datatype support

@bastelsblog for @voxpupuliorg

Vox Pupuli

What?

- Maintaining a module on your own is hard

Who?

- Changing best practices, vacations, losing interest

Why?

- Proper testing of a module requires a lot of stuff from the ruby ecosystem

- Ruby ecosystem and related tools are changing too fast for a single person

- Everything has to work on multiple Ruby/Puppet versions

- Rubocop

- Rubocop

@bastelsblog for @voxpupuliorg

Vox Pupuli

How?

Vox Pupuli

How?

- Unified module file/directory structure

Standards

@bastelsblog for @voxpupuliorg

Vox Pupuli

How?

Standards

- Unified module file/directory structure
- Unified code style

@bastelsblog for @voxpupuliorg

Vox Pupuli

How?

Standards

- Unified module file/directory structure
- Unified code style
- Unified review guidelines and testsuites with CI

@bastelsblog for @voxpupuliorg

Vox Pupuli

How?

Standards

Documentation

- Review guidelines: voxpupuli.org/docs/reviewing_pr
- [CONTRIBUTING.md](#)
 - Explain how the PR creator can test their changes
 - Explain what happens after a PR was created
- Templates for [raising issues](#) / creating a [PR](#)

Vox Pupuli

How?

Standards

Documentation

modulesync

- We are managing more than 141 modules
 - 113 in July 2019
- `modulesync` was developed by Puppet Inc, moved to Vox Pupuli
- It takes a `config file + templates`, throws it into every modules git repo
- Everybody can start it

@bastelsblog for @voxpupuliorg

Vox Pupuli

How?

Standards

Documentation

modulesync

- The generic tool: github.com/voxpupuli/modulesync
- The Vox Pupuli specific configuration:
github.com/voxpupuli/modulesync_config
- Because of the separation, every organisation can use it
 - With Vox Pupuli configs
 - Or with own configs

bastelfreak spec_helper_acceptance: Add helper to load custom files		Latest commit 99b38f5 13 days ago
..		
 .github	State centos8 as working docker container	4 months ago
 spec	spec_helper_acceptance: Add helper to load custom files	13 days ago
 .editorconfig.erb	add .editorconfig	2 years ago
 .gitignore.erb	Rename all templates to `erb`	3 years ago
 .msync.yml.erb	Release 2.12.0	29 days ago
 .overcommit.yml.erb	Added validate to list of bundle prepush rake targets	2 years ago
 .pmignore.erb	Add Dockerfile for local tests	17 months ago
 .rspec.erb	Rename all templates to `erb`	3 years ago
 .rspec_parallel.erb	make the rspec_parallel output more beautiful	3 years ago
 .rubocop.yml.erb	Revert rubocop TargetRubyVersion back to 1.9	4 months ago
 .travis.yml.erb	Make 'before_install' in .travis.yml configurable	4 months ago
 .yardopts.erb	Rename all templates to `erb`	3 years ago
 Dockerfile.erb	docker: add missing `rake` subcommand	7 months ago
 Gemfile.erb	bump default Puppet version to 6.X	16 months ago
 Rakefile.erb	Use voxpopuli-test	29 days ago

Vox Pupuli

How?

- Setup

Standards

Documentation

modulesync

- Sync all modules and create Pull Requests with a label

- Apply template to one module, don't commit

Documentation

modulesync

Travis-CI

- Free platform
- rpsec-puppet common Puppet*Ruby versions
- release modules to the forge
- 10-60min per module
- Soon we will move some workload git GitHub Actions to speed things up

@bastelsblog for @voxpupuliorg

Vox Pupuli

Standards

Documentation

modulesync

Travis-CI

Beaker

- creates a virtual machine or docker instance
- starts a complete OS in it
- executes puppet in it
- checks if everything looks as expected

Vox Pupuli

Summary

- We have great tooling and automation
- We have great people

@bastelsblog for @voxpupuliorg

Vox Pupuli

Summary

- We have great tooling and automation
- We have great people
- You need help with Puppet?
 - Let us know, we help out!
- You have an orphaned module?
 - Ping us, migrate it to us
- You have domain specific knowledge?
 - Ruby, Python, Rspec, Beaker, \$software we automate

@bastelsblog for @voxpupuliorg

Vox Pupuli

Summary

- You want to help out?
 - We are always looking for new Collaborators and Maintainers

Contact:

- IRC #voxpupuli on freenode
- Slack: #voxpupuli on slack.puppet.com
- Mailinglist: voxpupuli@groups.io
